

Analyze it

Team: Anti-Gravity

Members: Aristeidis Fkiaras, Charalampos Tsiligiannis

What is it?

“Analyze it” is a product that combines hardware and software in order to:

- Monitor driving behaviour
- Detect accidents and send notifications
- Visualize the data collected by the device

Who will buy it?

“Analyze it” is a product that we intend to sell in insurance companies

Revenue streams:

- The web platform
- The hardware

Technical Description

“Analyze it” is built using modern technologies:

- Backend: Python, Websockets
- Frontend: Bootstrap, Javascript(Three.js, Canvas.js)
- APIs: Google Maps API
- Hardware: Arduino (Various sensors and modules)

Future improvements

Features that could be added include:

- Integration with various modules (gps, gsm)
- Display more accurately the route of the car
- Estimates driver's insurance risk (using machine learning)
